

# WE'RE PLANTING TOMORROW'S HOMES. TODAY.

Renewable Plantation Pine framing is the most environmentally friendly way to build a new home. Pine plantations are replanted to ensure an infinitely renewable source of quality timber framing for tomorrow's homes, as well as today's. These plantations also soak up the greenhouse gases created by industrial processes - like those making steel house frames. Plantation pine frames offer a better living environment inside and outside your home. [For details call 1800 007 463](tel:1800007463)

# EVER VISITED A STEEL PLANTATION?

If you thought choosing a steel frame for your new home is environmentally friendly, think again. Timber frames come from infinitely renewable pine plantations. Carefully managed and harvested these plantations help soak up the greenhouse gases created by industrial processes - such as those that make steel. And they run on sunshine not fossil fuels. So for a better living environment inside and outside your home, choose renewable plantation pine frames. **For details call 1800 007 463**
